RE: Front End Software Developer

Dear Ms Madison,

With great interest, I submit my resume to your company for a co-op position with TAMVOES Health Inc. I am currently a Bachelor of Computer Science student at Conestoga College. I believe I have the ideal combination of skills and knowledge you seek in a qualified Front End Software Developer.

I am proficient in C++ and C# object-oriented programming and have been equipped with enough technical skills to help in accomplishing any given task or assignment. One of the projects I worked on was creating a program with C++ to determine the 3D orientation of a user's mobile phone by reading off of a text file filled with data to emulate machine learning. I have also built a Windows application that helps users create and add images to a photo album using C#. Some of my projects have been uploaded to GitHub, demonstrating my ability to work in a git environment.

Furthermore, I was part of a semester-long project where I designed the Front-end interface of a text-based Adventure Game using the C programming language. As a result, I have proven that I can effectively and efficiently work within a team because of my extensive participation and work experience in team projects. I also commit to studying further what has been taught and is being taught in class to improve my skill. Also, I believe the communication skills that I gained while working as a Customer Service Operations Specialist will come in handy when considered part of your team.

I am confident that my programming skills, work ethic, and willingness to learn would make me an excellent fit for your organization. Thank you for taking the time to review my application, and I am looking forward to providing more information in an interview.

Sincerely,

Demi Awe
